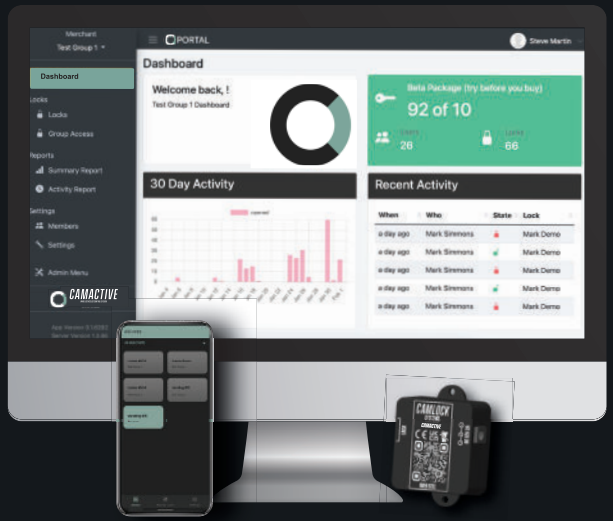
CAMACTIVE
WIRELESS ACCESS CONTROL SYSTEM

WHAT IS CAMACTIVE?

CAMACTIVE from Camlock Systems is a data driven access control system which allows users to control access to locks from a mobile device. By logging the data associated with the locking system, CAMACTIVE provides invaluable information on the process.

iOS and Android compatible, CAMACTIVE gives users datapoints detailing exactly when, where and by whom a machine is accessed. User permissions can be granted and revoked and one time access can be provided if required, negating the need for mechanical keys and other access peripherals such as cards. By monitoring access, the portal gathers data to form user and lock specific reports, which can be used to spot trends and highlight problems for process improvement.



Access Control

Keyless Operation

Audit Trails

Retrofittable

BENEFITS OF CAMACTIVE

Bluetooth

The app connects to CAMACTIVE using Bluetooth technology

Dedicated app

When granted permissions, the app can be used to access locks

Web portal

Administrators can add and remove users, see reports and get real time notifications

Control user permissions

Grant and revoke permissions as and when you need to. See who, when and where a machine is being accessed

Limit access scheduling

Restrict user permissions for time sensitive applications. Create access groups for route management

Customisable reports

Reports can be generated to suit individual requirements

Data encryption

Proprietary end to end TLS 1.2 encryption with 128 bit AES keys on transport from mobile to server.

Secure, offline access

One-time access can be granted for a set duration without the need for an internet connection

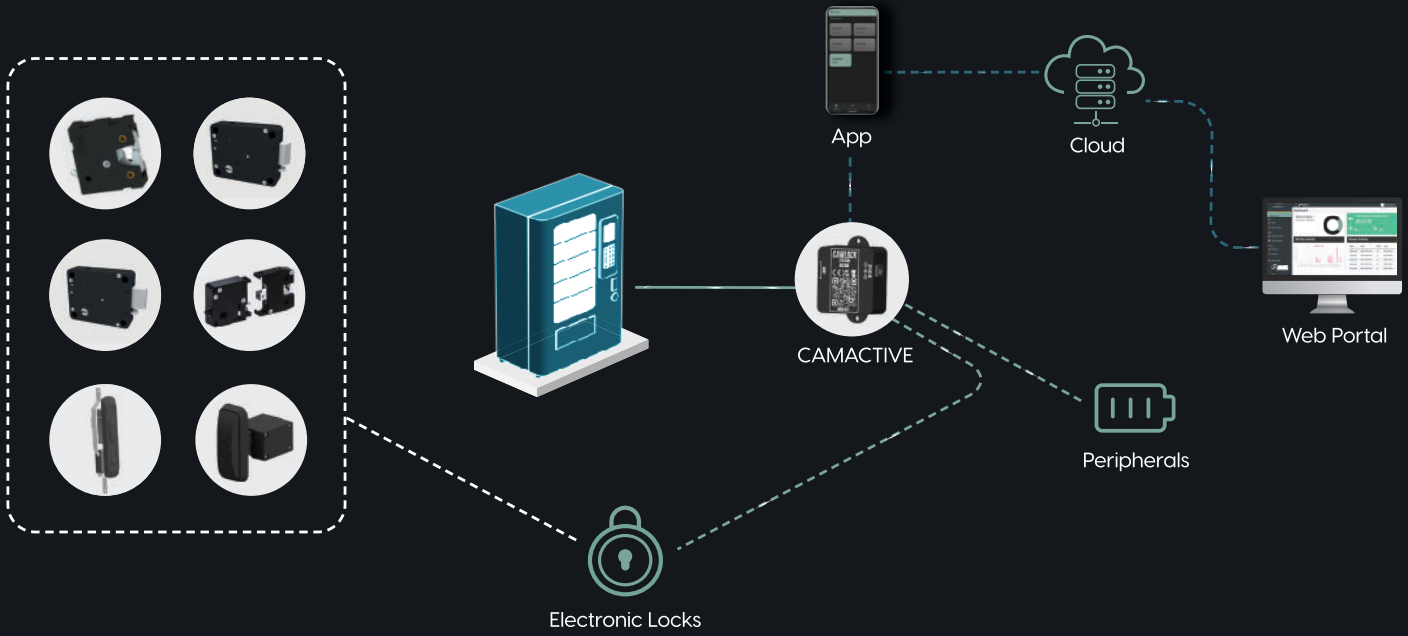
Multiple lock choices

Compatible with the full range of Camlock electronic locks

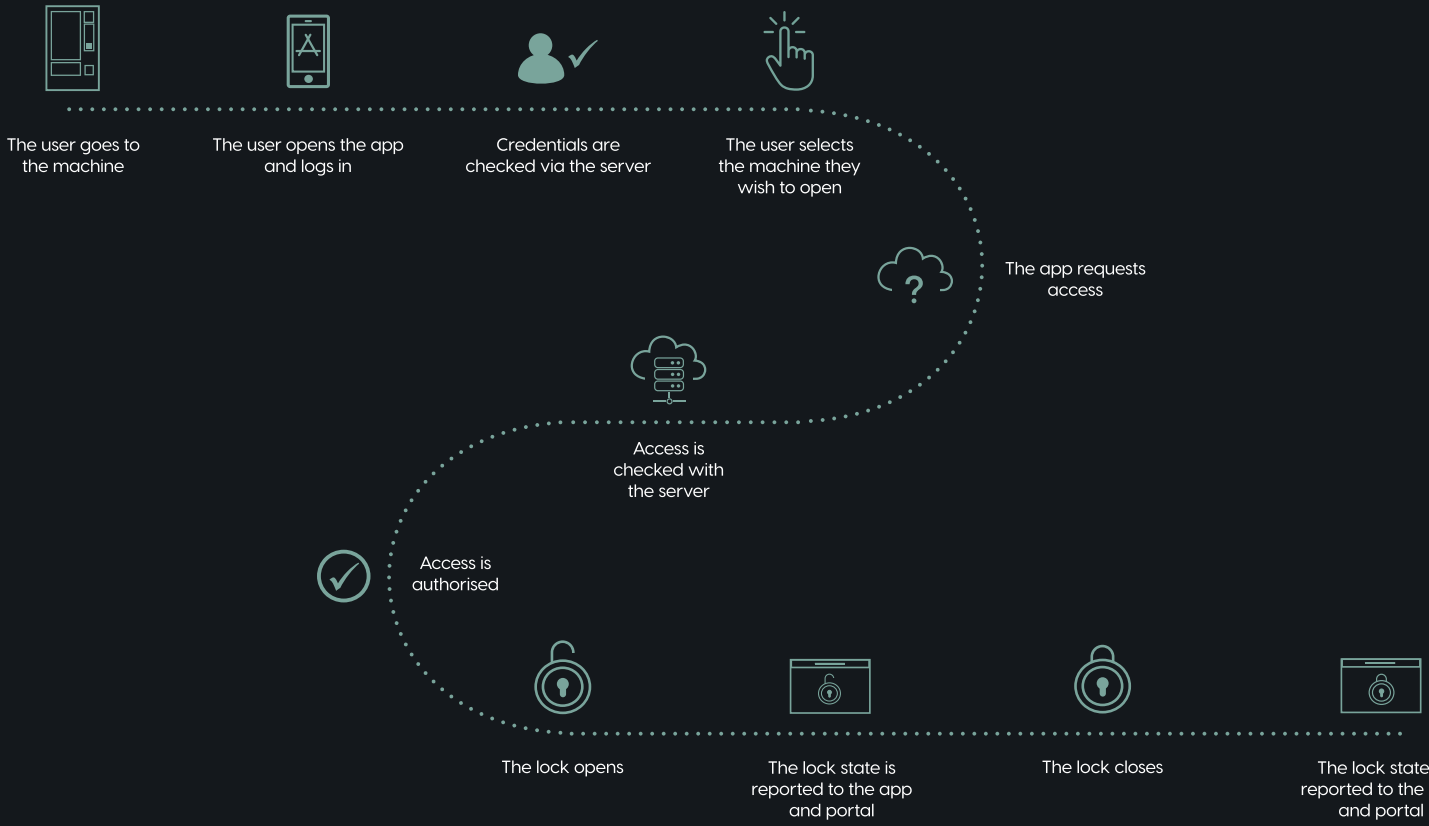
Mechanical override

Camlock electronic locks incorporate mechanical overrides for peace of mind

CAMACTIVE SYSTEM OVERVIEW

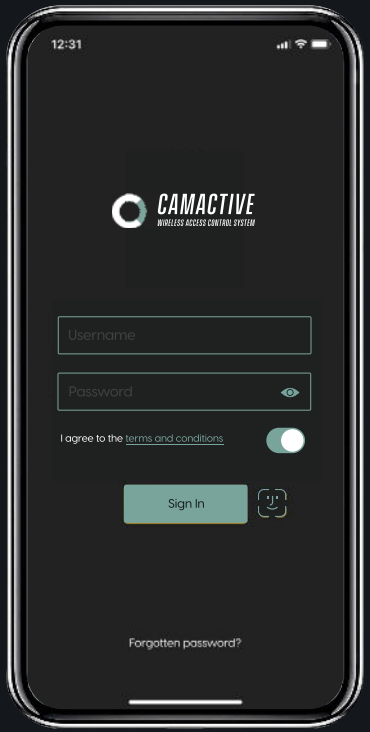


HOW DOES CAMACTIVE WORK?



camlocksystems.com.au

CAMACTIVE APP

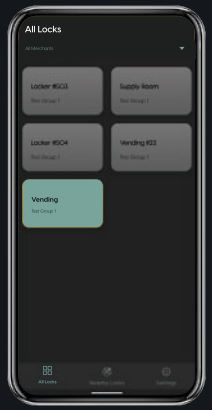


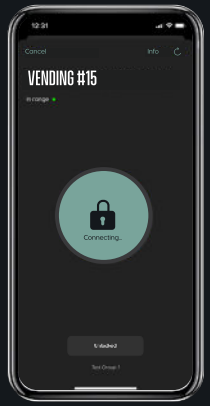
CAMACTIVE allows users to control locks with an intuitive, easy to operate mobile app, which acts as a virtual key and access control credential.

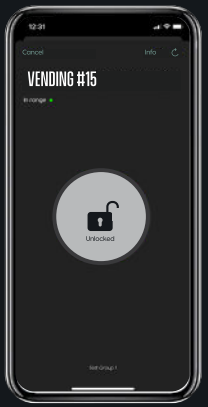
Available for both Android and iOS, each user is assigned an individual login.

The app is preconfigured to automatically show all the machines in range without the need to enter specific machine details.

Opening the locks is as simple as selecting the machine and tapping the open button.

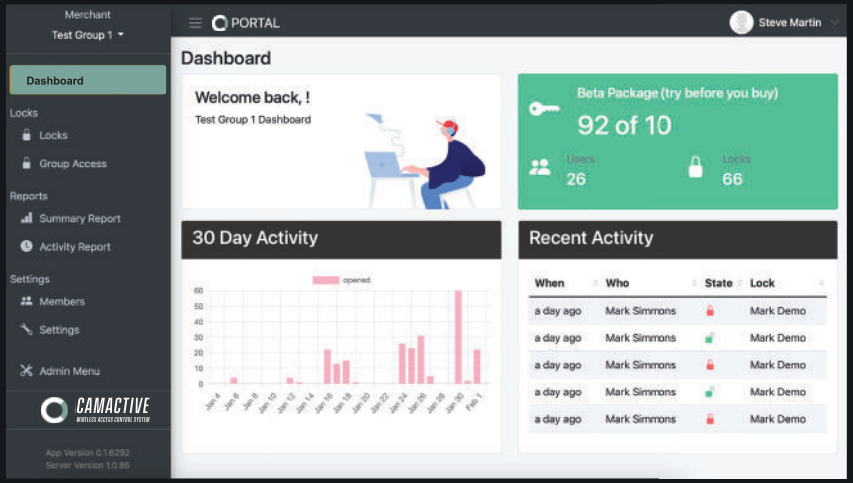


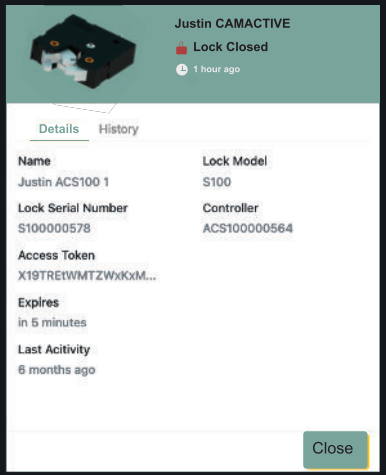




CAMACTIVE PORTAL

The CAMACTIVE portal gives clear visibility by recording data such as the date, time, duration, and identity of individuals accessing the machine, and from this, customisable reports and dashboards can be generated. This transparency can be critical in loss prevention, maintenance, efficiency of operations, and helps identify any anomalies or issues promptly. With CAMACTIVE users can control permissions and limit access scheduling giving complete control of each machine.





RETURN ON INVESTMENT

Simplifies Key Management by:

- Reducing the need to replace broken or lost keys
- Reducing the cost of administering large key suites
- Reducing or eliminating security issues of missing keys

Minimises costs by:

- Eliminating the need for replacement keys
- Reducing the cost of labour and travel

Reduces Route Substitution for:

- Getting keys to substitute route operator
- Returning keys to office or regular route operator
- Excess labour costs

Enhanced Accountability:

- Increased personnel visibility - where they are and for how long
- Managing route efficiency
- Reduced losses in product and cash

Measured Productivity and Enhanced Route Management:

- Ability to analyse and predict route efficiency
- Streamline fleet usage
- Reduce overtime

Streamline Management:

- Automated reporting reduces time, resources and manual work
- Less manual work and more data

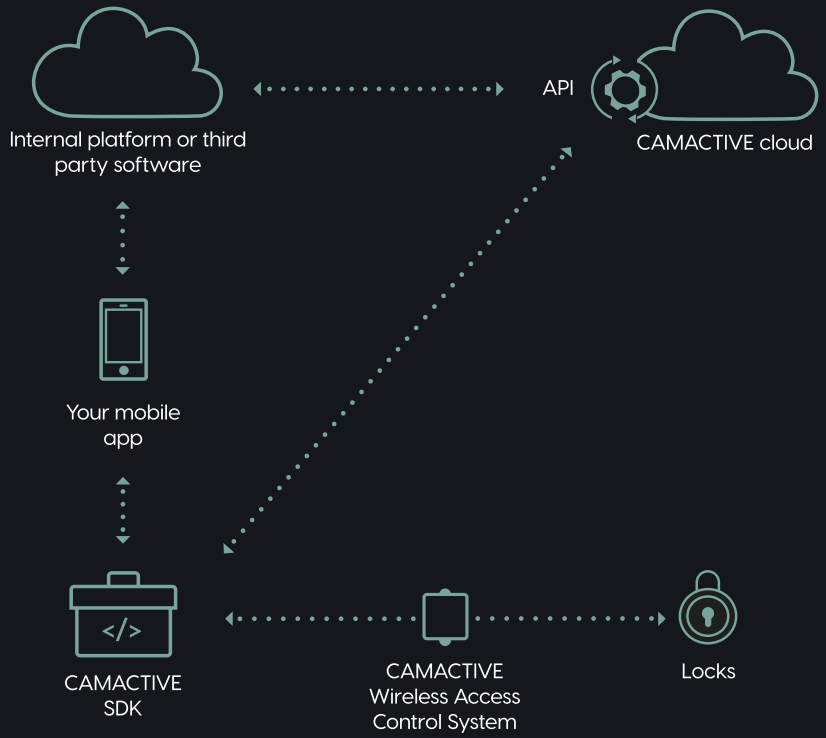
SDK & API



CAMACTIVE offers seamless integration with a wide range of systems and platforms. With our intuitive SDKs for both iOS and Android, developers can easily incorporate CAMACTIVE into their mobile applications.

Additionally, our robust API supports the administration portal, ensuring smooth and efficient management. To aid in the integration process, we provide world-class documentation, making it easy for developers to implement and utilise CAMACTIVE effectively.

LOCKING & ENHANCEMENTS

Our electronic latching products deliver a reliable, keyless and concealed solution to access management.

Electronic locks negate the need for physical keys, providing a secure solution and reducing costs in replacement keys and locks.

Our latches suit a range of requirements, from high strength to spacially constrained applications.

We offer a range of enhancements, including:

- Capacitor boards
- Batteries
- Wiring harnesses
- Mechanical and electronic overrides

Series 100

High strength, dual jawed rotary latch

Series 200 & 300

Robust slam and dead bolt latches

Series 400

Micro latching system available as slam or rotary latch

Series 500

Electronic Swing handle

Series 600

Electronic T-handle

Actuator

A versatile device which can pull, push or block existing bolt work
