Series 731O

SERIES 731O

CAM OR SCREW OPERATED T-HANDLE

OVERVIEW

The Series 731O is a key-operated pop-out T-handle specifically designed for use in vending machines. This versatile locking solution is engineered to meet the demanding security needs of vending systems, combining both screw and cam operation mechanisms for enhanced functionality. The design supports both cam and multi-point locking, providing a flexible security solution that can be adapted to different machine requirements.

The Series 731O can be upgraded with the use of a motor to become an electronic locking solution for applications requiring an added level of security.

TECHNICAL DATA

Operation	Screw or Cam Operation
Bolt	Concealed locking bolt
Materials	ZAMAK
Inserts	Accepts high security inserts
Design	Slim front profile
Cycle Testing	100,00 cycles
